## JUPITER CELLULAR TANK MONITORS

Jupiter Cellular Tank Monitoring Solutions allow you to increase the average drop size of your deliveries so that you can decrease the frequency of those deliveries, therefore, freeing up resources and reducing strain on your equipment. Simple and easy to use yet built to withstand even the harshest of environments, you can rest assured that the Jupiter system will continue to outperform for years to come without problems. The system installs to any R3D ready dial in minutes and works over a 3G cellular interface. No more phone lines or satellites needed. Secure cloud based system access gives users a simple, easy to use interface for monitoring, reporting and scheduling, that ensures you can focus on making the deliveries and not scheduling of these!

### BENEFITS

- Larger drops = Average delivery increase of up to 40%
- Deliver more gas, less frequently – Advanced algorithm calculates days to fill threshold point (best in business) – 2 way communication to and from server
- Field replaceable battery with up to 10 years' service life
- Durable construction designed for the harshest of climates
- Eliminates "out of gas" calls
- Lowest monthly system access fee and cost effective hardware solution
- User friendly Cloud based interface – Mobile friendly
- Automated alerts
- Ready to install out of box for most domestic tanks and bulk storage (R3D Ready Dials)
- Works on LPG and Oil tanks
- Monitor up to 3 tanks separately on one monitor = Less on site hardware for multiple tanks sets

**AVERAGE FIELD INSTALLATION  
TIME IS UNDER 5 MINUTES  
SET IT AND FORGET IT!**
